

FOR IMMEDIATE RELEASE

On 29 September, the global adhesive and sealant community celebrates its contribution to a sustainable and circular society.

Brussels, 25 September 2024

FEICA

FEICA, the Association of the European Adhesive & Sealant Industry, is a multinational association representing the European adhesive and sealant industry. With the support of its national associations and several direct and affiliated members, FEICA coordinates, represents and advocates the common interests of our industry throughout Europe. In this regard, FEICA works with all relevant stakeholders to create a mutually beneficial economic and legislative environment.

29 September 2024 is the International Adhesive & Sealant Day

International Adhesive & Sealant Day, celebrated each year on 29 September, gives everyone an ideal opportunity to highlight how our industry's products are crucial in a modern world and help create a more sustainable society.

Through the website <http://www.internationaladhesiveandsealantday.com/>, you can learn how adhesives and sealants contribute to a sustainable society: renewable energy and smart grids, durable constructions, heritage preservation, medical care, and packaging recyclability, to name but a few.

Kristel Ons, FEICA Secretary General said, 'The adhesives and sealants industry shows an example of collaboration across different value chains and markets to better and rapidly respond to regulatory and citizens' demands for products that meet circular requirements. We hope that everyone will share our enthusiasm to put our amazing global industry in the spotlight today as we celebrate the second International Adhesive & Sealant Day'.

In Europe, in particular, the following are some examples of how our industry supports the European Commission's goals:

- Renewable energy and energy savings: windmills, solar panels, batteries, the insulation of buildings, and light-weight vehicles
- Good health and well-being: medical and dental care, and prostheses and masks
- Products relating to the EU strategic industries: electrolyzers to produce hydrogen, sustainable biogas and biomethane, for carbon capture and storage, and for power grids
- Clean water and sanitation: water membranes and filters

- Avoidance of food waste: reusable packaging
